

The platform adjusts fore and aft up to 12".

Once installed and adjusted four holes need to be drilled through the 1/8" wall round tube to secure the tray in place (both sides of Tray). A guide hold in the square pocket tubing is already provided. This adjustment allows it to fit on all coupler capacities with adjustment forward and aft leaving room for weight distributing hitch hardware and battery and bottle gas trays.

The front stabilizing support is only necessary under the heaviest loads and rough terrain.

Model No. CC-250
Trailer Tray

The round stand tubes can pivot adapting to all couple sizes. Further, the frame mounts can accommodate 3.5"-6.5" tall tubing.
